ART-UNIT: 231

PRIMARY-EXAMINER: Zimmerman; Mark K.

ABSTRACT:

A representation of a shared structured container type data object with related data bases can be used to present information in a hierarchy or multi-level mode about the activities and status relating to the shared container type structured data object and related data bases and its content of a plurality of structured data objects as well as other information affecting or tracking the shared container type structured data object content in multi-levels. Further, user access control also

provides exclusivity or privacy to invoked changes to parts of the shared container type structured data object and related data bases without interference from other users but with an indication to the other users of access control attributes thereby providing coordinated consistency among users relative to changes to all parts of the shared container type structured data object. There is also the provision for sharing a container with related data base and for Quick Query access to the data base allowing the sharing of multiple objects within the container and the capability of populating and querying the various objects within the container as well as within the data base.
